

INTERNSHIPS  
IN EUROPE

# Programs in Business & Economics

Think about how amazing it would be to see Europe—not as a tourist—but the way Europeans do.

Experience the rush of living and working in a dynamic city.

Strengthen your résumé with a unique professional experience.

EPA Internships are about living, working, studying in Europe for a semester—and being changed forever by the experience.

- Semester students take Two University Classes

# Student Testimonials

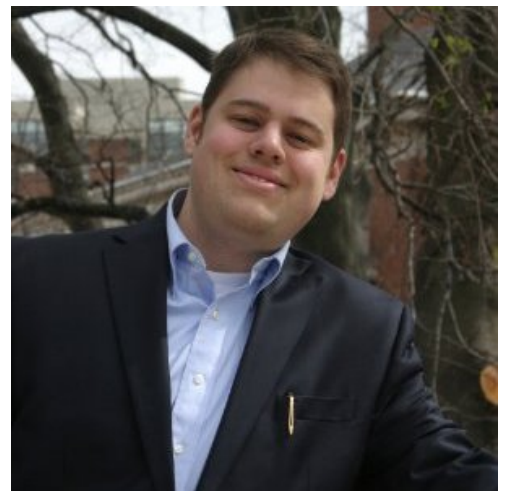

The laws of physics are universal, but the challenges of technology vary from place to place. An international experience in this field gives interns the chance to learn how professionals meet the needs of particular countries, communities, and projects. International computer science and engineering internships allow interns to expand their ability to solve problems and adapt to unfamiliar circumstances.

## Lextrend—Madrid, Spain

*John Hinkel*

John Hinkel spent five months in Madrid, Spain living with a host family, taking two classes at Nebrija University and working at a computer technology company called Lextrend. There he served as an account manager managing relations and conducting business with U.S. companies. The highlight of his internship was attending the Mobile World Congress with the CEO where he presented product demonstrations and information sessions in English.

## European Citizen Action Service (ECAS)—Brussels, Belgium

*Blake Silberberg*

Blake Silberberg wished to combine his skills in computer science with his interest in politics. In Brussels, Belgium he interned at the European Citizen Action Service (ECAS), an organization that strives to create a balance between public interest and corporate lobbying. During his internship he updated the ECAS website and Search Engine Optimization, provided technical management for the back end of the website and assisted with communication activities and event management for the organization.
